

Water Management Policy

Window Systems Division recognises that water is a valuable natural resource and should be conserved.

It is our policy to make all practicable and reasonable efforts to use water efficiently and reduce demand within our operations.

To achieve this we will:

- Monitor and measure water usage across the manufacturing sites in order to identify the most significant areas of use and prioritise these areas for reduction measures.
- Monitor for leakage and repair leaks quickly.
- Set water consumption targets.
- Communicate this policy to employees and involve them in achieving set targets.
- Install water saving devices for employee washing and toilet facilities.
- Investigate new developments in technology and plant, which may help to increase the efficiency of water use.
- Continue to operate closed water systems within manufacturing in order to reuse as much water as possible.
